Art Unit: 3731

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP \$ 608.01(o). Correction of the following is required: The claimed "tip portion" should be clearly identified and described in the specification.

Claim 8 is rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Applicant's disclosure. The instrument shown in figures 1A-1D of the application is admitted as being prior art. instrument convertible admitted prior art is а rongeur comprising front handle piece 106, bottom shaft piece 102 having tip portion (member 105 in combination with the distal portion of shaft piece 102 which is directly below gap 110) and handle portion 118, and a longitudinal axis from said handle portion to said tip portion, top shaft cutting piece 101 slideably engaged along said longitudinal axis with the tip portion (i.e. when the top shaft cutting piece 101 slides forwardly from the position shown in figure 1A so that it slides along the distal portion of shaft piece 102 which was directly below gap 110 but is now being covered by cutting piece 101), the top shaft cutting piece 101 being disengageable with the tip portion (when the top shaft cutting piece 101 is retracted to the position shown in figure 1A so that it no longer is directly above and engaged to the

Art Unit: 3731

distal portion of shaft piece 102) wherein, when the top shaft cutting piece is disengaged from the tip portion, the top shaft cutting piece remains attached to the rongeur so as to retain all parts of the rongeur in one attached unit. Alternatively, it would have been obvious that the top shaft cutting piece 101 is disengageable with the tip portion since cutting piece 101 can be retracted to the position shown in figure 1A in which it is not above and does not contact the tip portion.

Claims 1-7 are allowed.

Applicant's arguments filed August 18, 2004 have been fully considered but they are not persuasive. It appears that the claimed "tip portion" of applicant's invention must be the unlabeled foot plate in combination with only the distal portion of shaft 202 since the longitudinal axis in claim 8, line 4-5 is defined as being from the handle portion 218 to the tip portion. The tip portion cannot be the entire bottom shaft 202 since the claimed longitudinal axis does not extend from the handle portion 218 to the entire bottom shaft 202. A similar portion of the admitted prior art device is considered to be the claimed "tip portion".

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael
